Isoform 2 reduces the anti-apoptotic activity of Bcl-xl and Bcl-2.

This is likely consecutive to their change in subcellular location, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.

Isognation, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.

CC 11- FUNCTION: Seems to be a an adapter protein in the postsynaptic CC density (PSD) of excitatory synapses that interconnects receptors CC of the postsynaptic membrane including NUMDA-type and metabotropic CC of the postsynaptic membrane including NUMDA-type and metabotropic CC of the postsynaptic membrane including NUMDA-type and metabotropic CC of the postsynaptic membrane including NUMDA-type and metabotropic CC of the postsynaptic function. Overexpression promotes CC maturation of dendritic spines and the enlargement of spine heads CC via its shilty to recruit Homer to postsynaptic sites, and considered to enhances presynaptic function.
